Customer Problem Statement Template :

The Laptop Request Process project focuses on simplifying and accelerating the handling of employee laptop requests. By leveraging ServiceNow's service catalog, Flow Designer, and approval workflows, the solution eliminates manual bottlenecks and ensures requests are processed efficiently. End users can easily submit requests through a self-service portal by selecting laptop type and providing business justification. Automated routing triggers manager approval, and upon approval, catalog tasks are auto-generated for the fulfillment team. Notifications keep requesters updated without manual follow-ups. Where possible, integration with asset management and procurement tools enables end-to-end tracking from request to delivery. This results in faster turnaround, improved SLA compliance, reduced IT workload, and enhanced transparency for both employees and IT teams.

Aspect	Description in context of our project
 I am	 We are ServiceNow architects and process analysts dedicated to building an automated, compliant, and transparent laptop hardware request workflow.
 I'm trying to	 Create a single, seamless, self-service request portal for all laptop needs, including automated provisioning and standardized model selections.
 But	 Our current process is highly decentralized and relies on multiple departments using separate trackers and manual approvals.
 because	 There is no unified inventory management system, leading to stock discrepancies, unknown SLA status, and long wait times.
 which makes	 This project crucial for reducing hardware delivery times, ensuring regulatory compliance, and increasing employee productivity from day one.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
