

Project Design Phase Solution Architecture

Date	30 June 2026
Roll Number	23A51A0526
Project Name	Laptop Request Process
Maximum Marks	

Solution Architecture

The **Laptop Request Process** solution is built on the ServiceNow platform using the Service Catalog, Flow Designer, Approval Workflow, and Request/Catalog Task tables. Employees submit laptop requests through the self-service portal. The system validates the request, captures the required information through catalog variables, creates a request record, and automatically routes it to the employee's manager for approval. After approval, a catalog task is auto-generated and assigned to the IT fulfillment team for provisioning, while email notifications keep requesters informed throughout the process. Finally, the request status is updated in the system, providing complete visibility and efficient management of laptop requests.

SOLUTION ARCHITECTURE – Laptop Request Process in ServiceNow
